REACH Policy

1. Policy Statement

We committed to ensuring that products supplied through our business comply with applicable chemical safety and regulatory requirements.

We support the objectives of the **Registration, Evaluation, Authorisation and Restriction of Chemicals (REACH)** framework and aim to ensure that substances present in the products we sell do not pose unacceptable risks to human health or the environment.

Our approach is proportionate to the size and nature of our business as a small online retailer and distributor.

---

2. Scope

This policy applies to:

- Products sourced from suppliers and sold through our online platforms
- Packaging materials used in fulfilment and distribution
- Suppliers providing goods that may contain regulated substances

It covers compliance with the requirements of **UK REACH** where applicable.

---

3. Our Role in the Supply Chain

Insight Retail Ltd primarily operates as a **retailer and distributor** rather than a manufacturer or importer of chemical substances.

As such, our responsibilities typically include:

- Ensuring suppliers confirm compliance with relevant chemical regulations
- Maintaining product safety information where required
- Responding to customer enquiries regarding chemical safety where appropriate

Where products contain chemical substances or mixtures, we rely on information provided by suppliers and manufacturers.

---

4. Supplier Compliance

We expect suppliers to comply with applicable chemical safety legislation, including **UK REACH** requirements.

Where relevant, we may request supporting documentation such as:

- Supplier declarations of REACH compliance
- Safety Data Sheets (SDS) for chemical products
- Confirmation that restricted substances are not present above permitted thresholds

Suppliers are expected to notify us if any product supplied becomes subject to regulatory restrictions or safety concerns.

---

5. Restricted and Substances of Very High Concern (SVHC)

Where applicable, we will take reasonable steps to ensure that products supplied do not contain substances restricted under **UK REACH**.

If products contain **Substances of Very High Concern (SVHC)** above regulatory thresholds, we will ensure that appropriate information is available to customers in accordance with regulatory requirements.

---

6. Product Information and Communication

Where chemical safety information is required:

- Relevant documentation will be maintained and made available where appropriate
- Customers will be provided with safety information if required by law
- Product listings will include relevant hazard information where applicable

7. Monitoring and Regulatory Awareness

We monitor relevant regulatory updates through:

- Official government guidance
- Supplier communications
- Industry updates

Where regulatory changes affect products we sell, we will review affected products and take appropriate action where necessary.

---

8. Continuous Improvement

We will periodically review its supplier documentation and product information processes to support ongoing regulatory compliance and customer safety.

---

9. Responsibility

Responsibility for implementing and maintaining this policy rests with the Directors of Splashback.co.uk.

This policy will be reviewed annually or when significant regulatory changes occur.
